README

TEST ENVIRONMENT ARCHITECTURE

TESTING PROCESS WITH JDI FRAMEWORK

```
ProductPage.ProductType.Select(«jacket»);  
ProductPage.Price.select(«500$»);  
ProductPage.Colors.check(«black», «white»);  
Assert.isTrue(ProductPage.Label.getText(),  
               «Armani Jacket»)
```

```
LoginPage.Open();
```

```
LoginPage.LoginForm.Login(admin);
```

```
SearchPage.Search.Find(«Cup»);
```

```
Assert.AreEqual(ResultsPage.Products.Count(), expected);
```

PAGE ELEMENTS

ELEMENTS

```
private IWebElement UserName;  
private IWebElement Password;  
private IWebElement LoginButton;
```

• ACTIONS

- EnterUserName(String name);
- EnterPassword(String name);
- ClickLoginButton();

• BUSINESS ACTIONS

- Login(User user)

ELEMENTS

```
public TextField UserName;  
public TextField Password;  
public Button LoginButton;
```

- **ACTIONS**

- ---

- **BUSINESS ACTIONS**

- Login(User user)

ELEMENT

```
public DropDown UserStatus;
```

- **ACTIONS**

- Select(string option)
- boolean IsSelected()
- List<String> AllOptions()
- string GetValue()

- ❖ Simple
- ❖ Complex
- ❖ Composite

FOR BUSINESS

- Write test code **faster up to 5 times**
 - Average result around 2.8 times
 - 4.7 times speedup on the project with standard implementation
- Produce **less** amount of **test code (loc) up to 3 times**
 - Average result around 2.1 times
 - 2.8 times reduction on the project with standard implementation
- Achieve **higher clearness of tests**
 - Decrease of support time for test projects
 - Lowering of project entry barrier for newcomers
- Complete projects with **higher quality**
 - Based on 70 % answers in survey

- **Reuse investments** from one Project on another
 - Based on 5 years of work and more than 30 projects that already use JDI
- **Save up to 80% test effort** by migrating tests to other Platforms
 - Based estimated average scope reductions for all test process stages
 - Example: migrate Web tests to Mobile platform
- Can be **used in most of projects** with UI Automation
 - Actually we have no projects where JDI is not applicable. The only reason why not all of our projects use JDI is Client requirements
- **Save up to 30-40% money** from whole test process
 - Based on average calculation of scope reductions for all test process stages

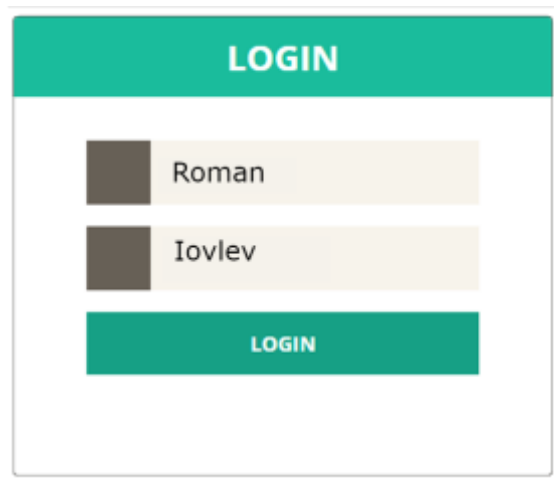

FUTURE

```
ProductPage.ProductType.select(«jacket»);  
ProductPage.Price.select(«500$»);  
ProductPage.Colors.check(«black», «white»);
```

I select 'jacket' ProductType on ProductPage
I select '500\$' Price on ProductPage
I check 'black' and 'white' Colors on ProductPage

- Chrome plugin
 - Get ui elements to page object in browser
 - Auto generation

A screenshot of a web login form. It has a green header bar with the word "LOGIN" in white. Below the header, there are two input fields: the first is labeled "Roman" and the second is labeled "Iovlev". Below these fields is a green button with the word "LOGIN" in white. A large blue arrow points from this form towards the code on the right.

```
public class LoginForm extends Form<User> {  
    @FindBy (css=".login")  
    public TextField login;  
    @FindBy (css=".psw")  
    public TextField password;  
  
    @FindBy (css=".submit")  
    public Button login;  
}
```

```
@ServiceDomain("http://service.com")
public class ServiceExample {
    @GET ("/color/get")
    public RestMethod getColor;
    @POST ("/color/change/100")
    public RestMethod changeColor;
}
```
