Agenda

- User-Defined Functions
- Temporary Tables vs Table Variables
- Float Data Type
- Window Functions

User-Defined Functions

Temporary Tables vs Table Variables

Temporary Tables

```
create table #Temp  
( Column1    int  
  , Column2    int );
```

Table Variables

```
declare @Temp  
( Column1    int  
  , Column2    int );
```

Float Data Type

float [(n)]

n	Precision	Size
1 - 24	7 digits	4 bytes
25 - 53	15 digits	8 bytes

decimal (p, s)

Precision	Size
1 - 9	5 bytes
10 - 19	9 bytes
20 - 28	13 bytes
29 - 38	17 bytes

Window Functions

```
select SalesOrderID, SalesOrderDetailID, ProductID, OrderQty, UnitPrice, LineTotal
      , GrandTotal = sum( LineTotal ) over( partition by SalesOrderID order by SalesOrderDetailID )
from Sales.SalesOrderDetail
order by SalesOrderID, SalesOrderDetailID;
```

SalesOrderID	SalesOrderDetailID	...	LineTotal	GrandTotal
43659	1		2 024.99	2 024.99
43659	2		6 074.98	8 099.98
43659	3		2 024.99	10 124.97
43659	4		2 039.99	12 164.96
43660	5		419.46	419.46
43660	6		874.79	1 294.25
43661	7		809.76	809.76
43661	8		714.70	1 524.46

- 1** The PARTITION BY defines the windows, one for each SalesOrderID
- 2** The ORDER BY sorts the rows within the window
- 3** The SUM calculates accumulative total value

Thank you!
