Зачем нужна HTML-минификация?

//developers.google.com/speed/pagespeed/insights

1990-е: Ручная HTML-минификация

Итак, что нужно сделать, чтобы улыбка не сходила с лица, а конкуренты побежали в аптеку за антидепрессантами:

- Перестать писать кавычки в тэгах. ...
- Похоронить все тэги <meta name="generator">. ...
- Не писать пробелы в <meta name="keywords">, ...
- Поганой метлой все комментарии прогнать. ...
- Не называйте картинки длинными именами. ...

Что такое WebMarkupMin?

WebMarkupMin — это очень зрелый минификатор, не только для HTML, но также для XML и XHTML, а также для тегов script и style, встроенных в ваш HTML. Они предоставляют множество NuGet пакетов для подключения к вашим ASP.NET приложениям, как для ASP.NET 4.х использующих MVC, HttpModules, WebForms(!), так и к счастью для нас, ASP.NET Core.

Выводы

- 1. HTML-минификация это уже стандартная процедура при разработке вебприложений
- 2. Позволяет сократить размер веб-страницы в среднем на 21-24%
- 3. Позволяет увеличить скорость рендеринга веб-страницы в браузере
- 4. При использовании вместе с Gzip-сжатием с помощью HTML-минификации можно в среднем сэкономить 9-12%
- 5. В ASP.NET-приложениях рекомендуется кэшировать результат HTML-минификации
